

SUSTAINABLE PACKAGING

Human Active Technology has made a commitment to responsible packaging and has met requirements in the ANSI/BIFMA e3-2019 Furniture Sustainability Standard.

We receive our packaging suppliers to utilize packaging made from readily recyclable materials. Inbound packaging materials are reused by modifying boxes, salvaging pallets for outbound shipments, or a recycling stream. Outbound packaging materials are made from 100% recyclable materials consisting of corrugated cardboard cartons, plastic trays, paper pulp trays, inflatable void fill, and protective paper cushioning. These materials consist of minimum 28% pre-consumer and 16.5% post-consumer recycled materials.

We strive to eliminate all foams on our supply chain and distribution network.
